

1. I read the instructions, looked at examples in the book, and wrote down what the program should do
2. Yes, I wasn't sure how events work. I checked the sample code and tested small button actions to see what will happen
3. Yes, I planned the buttons and logic separately instead of doing everything at once
4. I used those that I am already familiar with
5. Small pieces
6. I ran the program after adding each feature to see if it broke
7. Connecting the button clicks to the logic and keeping track of data
8. I looked back at sample code, searched simple errors, and tried printing values to see what was wrong, also was taking short or long breaks before revisiting again
9. Yes, plan small steps, test often, and always check user input before using it.
